PROTECOR DURA

High-performance protective for treated surfaces

Colour : — Use : — Colour coordinates : **L:** — **a:** — **b:** —

Product description

PROTECOR DURA is an advanced technical solution specifically developed to improve the stability, gloss, and durability of colour on treated surfaces.
The product forms a thin protective layer that helps protect the surface by reducing colour alteration and surface mechanical abrhasion. Its application provides a uniform and long-lasting finish, even under particularly demanding environmental conditions.

User instructions

Apply a small amount of product, approximately one drop, onto a soft, dry cloth. Gently wipe the cloth over the surface of the part to be protected, distributing the product evenly, wait 30” (seconds) and wipe again the surface with a dry new cloth.

To increase the thickness of the protective layer, multiple successive applications may be carried out after a forced drying at 150° C° in a ventilated or static oven. Each individual application provides an indicative coating thickness of approximately 1 µm.

PROTECOR DURA can also be applied by immersion or by means of an airbrush, depending on the surface to be treated and the required application method. The most versatile application is by using the microfiber cloth absorbed with some PROTECOR DURA

When not in use, keep the container tightly closed and store in a cool, dry place, strictly recommended to use an airless container.

Safety Information
Please refer to the safety data sheets for any information regarding safety and disposal (MSDS).
