b: —

Product description

CLEANOR 303P is a cyanide neutralization in powder form.

Operating conditions

Parameter	Average suggested value
Treatment time	15 seconds
Temperature	20 °C
Voltage	—
Current density	—
Cathodic efficiency	—
Deposition speed	—
Anodes	—
Agitation	Necessary
Ventilation	Necessary

Maintenance of plating bath

CLEANOR 303P solely deteriorates because of the neutralizing action of the cyanide contained in the washing solutions. In general term, it has been noticed that 5 g of CLEANOR 303P are necessary for neutralizing 1 g of cyanide potassium.

Safety Information

Please refer to the safety data sheets for any information regarding safety and disposal (MSDS).

Preparation of the solution

CLEANOR 303P is a neutralizing product in salt form. To prepare a 100 liter bath ready to use , proceed as follows:

- Fill the tank with 50 liters of demineralized water.
- Turn the extractor fan on and wear protective gloves and goggles before proceeding with the dissolution operations.
- Turn the filter pump on and add 1.25 kg of CLEANOR 303P , whilst continuing to stir.
- Add demineralized water up to the full capacity of the tank and start the preparation process.

Notes

Instructions indicated in Our Process technical data sheets are the result of attentive checks and have been written as a guideline. They represent the best of our knowledge and refer to a normal use of our products. Such products are guaranteed in their quality up to the delivery: we cannot guarantee for the correct use of them, as this action is not under our direct control (addition or correction to plating baths are made by customer's personnel). As a consequence, process instructions have not to be intended as a guarantee of the final result in the use of our products.
