

PALLADOR 102C

PALLADIUM FOR PLATING SOLUTION

Colour : **White palladium**

Use : **Bath**

Colour coordinates : **L:85.5**

a:0.8

b:4.2

Product description

PALLADOR 102 is a concentrate palladium plating bath purposely designed for flash plating. PALLADOR 102 are characterised by the considerable compactness and resistance of the galvanic layer which makes it particularly suitable as a barrier against the diffusion of gold deposits on copper and its alloys. These characteristics of compactness and resistance also make PALLADOR 102 particularly suitable for use as an intermediate layer between white gold and rhodium, considerably reducing the possibility of scratches and abrasion of the rhodium-plated layer affecting the alloy below.

Operating conditions

Parameter	Average suggested value
Deposition time	90 seconds
Temperature	28 °C
Voltage	2.2 V
Current density	0.5 A/dm ²
Cathodic efficiency	20 mg/Amin
Deposition speed	0.1 um/min
Anodes	Ti/Pt net
Agitation	Moderate
Ventilation	Necessary

Maintenance of plating bath

For small plating solution volumes (up to 10 litres) we suggest to use the bath without replenisher . For higher volumes we suggest to use the related replenisher composing the bath:

- **PALLADOR 100RP** or **PALLADOR 120RP**: add 20 ml of **PALLADOR 100RPA** or **PALLADOR 120RPA** and 20 ml of **PALLADOR 100RPB** or **PALLADOR 120RPB** every 100 Amin.
- **PALLADOR 100RA** : add after analysis.
- **PALLADOR 100RB** : add after analysis.
- **PALLADOR 100WA** : add after analysis.
- **PALLADOR 100S** : add after analysis.

Safety Information

Please refer to the safety data sheets for any information regarding safety and disposal (MSDS).
